Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5. GAGAGAGAGAGACCAAGAGCTTTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence [5, GAGAGAGAGATTATATAATTAATTAATCCCCCCCCCCC 3']. cDNA was cleaved with XDOI and SELI. Cloning sites, 5' end: XDOI, 3' end: SELI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Please visit our web site (http://genome.gsc.riken.jp/) for further

1st strand cDNA was primed with a Noti-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ACTGCACTGAAATCTAAGGATCGGAAAGAATCTGTGGTTCAGGAGGAAAATTCCTTTTCA 1443

/clone_root ganglion made by oligo-dT priming.
Directionally cloned using the following adaptors:
5'-TCGACCACGCCGTCGG-3' and sade by oligo-dT priming.
1 kb for average insert length 1.7 kb. This is a primary library, non-amplified. Library constructed by Life Technologies and donated by J. Lupski, M.D./Ph.D. (Baylor College of Medicine) and is available through Life
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

CR623938 811 bp mRNA linear HTC 21-JUL-2004 full-length cDNA clone CS0DB002YJ01 of Neuroblastoma Cot 10-normalized of Homo sapiens (human).

RESULT 14 CR623938 LOCUS DEFINITION

Extract with a NotI-oligo(dT) primer. Five prime te-strand cDNA was digested with Not I and cloned EcoR V sites of the pCMVSPORT 6 vector. Library vary was constructed by Life Technologies, a 2431 2491 2611 ATCTTTGTGCCATCTTGTATATAGGTATTTTTTACATGGGTTG 2671 2731 2791 2851 TAAGAAAAAGTATGTATTGCATACTTAGTAGAATAGATCACAACATACAAATTCA 2911 ô 120 240 300 1004) Genoscope - Centre National de Sequencage : edex - FRANCE (E-mail : seqref@genoscope.cns.fr pe.cns.fr) BAAGGTGAACCTCGAAACTTGTTTCATAATCTTTCAAAAGTTG 420 9 Chordata, Craniata, Vertebrata, Euteleostomi, Primates, Catarrhini, Hominidae, Homo. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoX V sites of the pCMVSPQRT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster

It currently consists of 3 conties. The true order of the places is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 0); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the entire insert of this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NOTICE: This sequence may not represent the entire insert of this colone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence was finished as follows unless otherwise noted:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Center: Washington University Genome Sequencing Center
